## **Toxy-LT**

**Arved Klütz recumbents** are perhaps best-known for their Toxy SWB recumbent, and its low-racer cousin the Toxy ZR.

**At IFMA they** were showing off a new model to fill the gap between these two: a semi-low fast tourer-type recumbent called the Toxy LT.

**With full suspension** and the usual vast range of accessories, it looks to be competing head on with HP Velotechnik's Speedmachine.

**Like most Toxys,** it can be had with over or underseat steering, solid or mesh seat, and fairings front and rear.

**I've always liked** the Toxy detailing, with nice solid aluminium frames painted stunning colours, and this is no exception.
